DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-4 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-2 of copending Application No. US 2005/0157115A1 in view of US 2005/0157119.

This is a provisional obviousness-type double patenting rejection.

US 2005/0157115A1 teaches an inkjet printer cartridge comprising a printing fluid storage in fluid communication with a pagewidth printhead and an air distribution assembly arranged to distribute compressed air along the printhead. The air distribution

Art Unit: 2861

assembly would also suggest an air inlet to eject air into the printhead, as well as the air inlet which directs air would receive air from an air supply.

US2005/0157115A1 does not explicitly teach that the air distribution assembly includes one or more conduits arrange to direct air, as well as the air inlet is configured to mate with a complementary formation of the inkjet printer.

However, US 2005/0157119 teaches an air compressor having an air outlet pipe positioned to couple with an air inlet. US 2005/0157119 also teaches an air source in communication with the air inlet.

Therefore, it would have been obvious to incorporate the air compressor having an air outlet pipe taught by US 2005/0157119 into the invention of US 2005/0157115 for the purpose of directing air.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claim 1 is rejected under 35 U.S.C. 102(a) as being anticipated by Martinez-Pacheco (US 2004/0145683).

Martinez-Pacheco teaches a printer cartridge comprising:

Claim 1:

- a removable cartridge including a printing fluid storage, a printhead in fluid communication with the fluid storage, an air inlet, and one or more conduits arranged to direct air from the air inlet over the printhead (figure 3 teaches cartridge 100, fluid storage 101, air inlet 113, fitment 112 vents air above printhead 103)
